

# Yevheniia Budko

Front-end developer

## About Me

I am a motivated Front-End Developer with 7 months of hands-on experience creating interactive, user-friendly web interfaces. Proficient in React, JavaScript, CSS, and HTML, and skilled in building modern web applications. I strive to provide value through my work and contribute effectively to a development team.

## Education

National Pedagogical Dragomanov University,  
Kyiv (2001-2005)

Faculty: Foreign philology / Major: teacher of  
English language and foreign literature

## Summary of Current Experience

Starting in December 2024, I am an intern at a startup with an international team, where I develop a frontend part of a web platform using React, TypeScript, and AntDesign. My responsibilities include creating responsive and visually appealing pages based on Figma designs, collaborating closely with the designer, and addressing various inquiries throughout development.

## Main Features Implemented

- Creating responsive web pages based on Figma designs and implementing adaptive layouts for all screen sizes.
- Building and integrating user registration, authentication, and dynamic form flows, including backend (Strapi) and HubSpot CRM connections.
- Working with Mapbox and Turf.js to develop interactive maps with drawing, file uploads, and automated geospatial calculations.
- Collaborating with REST APIs, customizing backend content structures, and contributing to backend logic.
- Independently managing feature development, version control (Git), and UI/UX improvements.

## Past Experience Overview

- Worked on the layout of web pages based on existing designs.
- Administered and moderated websites, ensuring smooth operations and user engagement.
- Managed brand pages on social media platforms, including Facebook and Instagram.
- Wrote engaging infotainment content and translated business correspondence and other materials to/from English and Ukraine.
- Gathered analytical data based on specific criteria, and compiled detailed reports.
- Provided online user support and maintained communication with customers.
- Managed databases and archives using specialized software and MS Office tools.
